Likelihood Bounds Defined by Contour Points

Left plot axes: Eta (x-axis, 90 to 160), Beta (y-axis, 1.0 to 4.0)

Right plot: Time To Failure (x-axis), Unreliability [%] (y-axis)

w2test
- ranks = median
- n (fail | cens.) = 10 (10 | 0)
- weibull (mle−rba)
- beta = 2.318
- eta = 123.7
- loglik = −52.58

CI bounds, type = "lrb"
  CI = 90 [%], dof = 1
